SWINGiT Golf Club FAQ

- **I already have one of your products such as MagTube or Starter, can I buy this without the cup to save money?** Yes! You can find it [here](#).
- **How do I secure my controller?** The friction in the cup is the main thing holding your controller in place. Wipe down the controller for maximum friction. Regularly push the controller back in the cup (easy when using the controller for inputs) to maintain this friction. Follow this [video guide](#) for securing the straps. **Before use, make sure to inspect and ensure it is secure.**
- **How do I reduce tracking loss?** If your headset/controllers use inside out tracking, you will need to keep the SWINGiT in front of you at all times for optimal tracking to prevent tracking loss. The cup can be rotated along its axis +/- 90 degrees to assist with maintaining tracking. This may take some practice but you will get a feel for where you can have it and where you can't. **Lastly, if you are using Meta Quest 3 disable hand tracking.**
